**Sample Results and 90th Percentile**

Number of Samples Required:	5	Lead 90th Percentile (mg/L):	0.004
Number of Samples Submitted:	5	Copper 90th Percentile (mg/L):	0.463

**Certification of Sample Collection**

By Signing I Certify:

Each first draw tap water sample for lead and copper is one liter in volume and, to the best of my knowledge, has stood motionless in the plumbing for at least six hours.

Each first draw sample collected from a single family residence has been collected from the cold water kitchen tap or bathroom sink tap.

Each first draw sample collected from a non-residential building has been collected at an interior cold-water tap from which water is typically drawn for consumption.

If a resident volunteered to collect a tap water sample from his or her home, I certify that they have been properly instructed in the proper methods for collecting lead and copper samples. I do not challenge the accuracy of those sampling results. Enclosed is a copy of the material distributed to the residents explaining the proper collection methods.

I do not challenge the accuracy of these sampling results.

No changes to the sampling sites were made. If changes were made to sampling sites a Change of Sampling Site form is attached hereto.
